PROJECTS

1. Employee Payroll Management System :- The Employee Payroll Management System is a web-based application developed using HTML, CSS, JavaScript, PHP and MySQL. This system is designed to efficiently manage employee salary records and automate payroll processing. It allows administrators to add new employees, update existing employee details, and delete employee records from the database. The system securely stores all salary-related information and automatically generates payslips for employees.

2. Tourism Management System :- Developed a web-based Tourism Management System that enables users to explore tourist destinations, view tour packages, make bookings, and manage travel-related information. Implemented user authentication, package management, booking management, and database integration using PHP and MySQL. Designed a responsive and user-friendly interface to enhance the travel planning experience.

3. Company Management System:- The Company Management System is a dynamic web application developed using HTML, CSS, JavaScript, PHP, and MySQL. This system helps manage various organizational activities in an efficient and structured manner. The application allows management of employee profiles, leaves, and holidays. It also provides updates about company news and assets. Additionally, it includes a help desk feature to assist employees with their queries and concerns.
